

Fingerjoint Mouldings

All Masisa fingerjoint mouldings are made from timber grown in sustainably managed forests that have earned FSC (Forest Stewardship Council) Chain of Custody certification. Plantation pine combined with state-of-the-art manufacturing techniques result in tight-machined joints, the highest quality and strength, plus exceptional value to our customers.

Profiles include casing, base, crown, chair rail, split jamb, and exterior frame. Fingerjoint mouldings are available unfinished or primed, and most are also available with our UltraPrime® jesso finish.

Environmental Capabilities

By managing the process from forest to finished product, Masisa ensures consistent supply, quality and reliability today and tomorrow. Because our fingerjoint wood mouldings carry the eco-friendly FSC Chain of Custody certification label, our customers can rely on our proper replanting practices, sound forest management and responsible tree harvesting that combine to provide a healthy environment and a long-term, renewable resource.

Mill Capabilities

From our wide assortment of standard profiles, Masisa USA will work with you to create customized designs to meet your customers' specifications and deliver orders packaged to customers' requirements.

Product Performance

Masisa's long-term experience in the millwork industry has resulted in refined manufacturing processes that produce pine fingerjoint mouldings that perform above industry standards. Minimal defects and ease of installation and finishing are just a few of the benefits to using fingerjoint mouldings and jambs.
